

## How to Open VUGoStreamController on Your Mac

If you see a message saying the app is "damaged and can't be opened", follow these steps.

---

**Step 1** — open the .dmg file, move the app from it to Applications folder.

---

**Step 2** — Open the app called **Terminal** on your Mac.

You can find it here:

Finder → Applications → Utilities → Terminal

---

**Step 3** — Copy and paste the command below into the Terminal window, then press **Enter**:

```
xattr -cr /Applications/VUGoStreamController.app
```

⚠ If you haven't moved the app to your Applications folder yet, use this command instead:

```
xattr -cr /Volumes/VU\ GoStream\ Controller/VUGoStreamController.app
```

---

**Step 4** — Nothing will happen on screen — that's normal. Just close the Terminal window.

---

**Step 5** — Try opening **VUGoStreamController** again. It should now open without any warning.

---

💡 You only need to do this **once**. After that, the app will open normally every time.
